VOLUNTARY ANNOUNCEMENT – APPROVAL BY THE TGA FOR MARKETING OF TORIPALIMAB

This announcement is made by Shanghai Junshi Biosciences Co., Ltd.* (上海君實生物醫藥科技股份有限公司) (the "**Company**") on a voluntary basis. Please also refer to the overseas regulatory announcement published by the Company on 17 January 2025.

The board (the "**Board**") of directors (the "**Directors**") of the Company is pleased to announce that toripalimab (product code: JS001) has obtained the marketing authorization issued by the Therapeutic Goods Administration of the Australian Government Department of Health and Aged Care (the "**TGA**"). The New Chemical Entity (the "**NCE**") application for toripalimab in combination with cisplatin and gemcitabine, for the first-line treatment of adults with metastatic or recurrent, locally advanced nasopharyngeal carcinoma ("**NPC**") and toripalimab, as a single agent, for the treatment of adults with recurrent unresectable or metastatic NPC with disease progression on or after a platinum-containing chemotherapy has been approved by the TGA. Toripalimab has become the first and only immuno-onocology treatment for NPC in Australia.

ABOUT TORIPALIMAB

Drug name: Toripalimab Injection

Indications: toripalimab in combination with cisplatin and gemcitabine, for the first-line treatment of adults with metastatic or recurrent, locally advanced NPC, and for toripalimab, as a single agent, for the treatment of adults with recurrent unresectable or metastatic NPC with disease progression on or after a platinum-containing chemotherapy.

NPC is a malignant tumor that occurs in the epithelium mucosae of the nasopharynx and is one of the most common types of head and neck cancers. According to GLOBOCAN 2022 statistics, the number of newly diagnosed NPC cases in 2022 exceeded 120,000 worldwide. Toripalimab is the only preferred regimen recommended for the comprehensive treatment of recurrent or metastatic NPC in the National Comprehensive Cancer Network (NCCN) Guidelines (Version 1.2025) for head and neck cancers.

The approval of the NPC indications is primarily based on the results from JUPITER-02 (a randomized, double-blind, placebo-controlled, multinational multi-center Phase III clinical study for the first-line treatment of NPC, NCT03581786), and the results from POLARIS-02 (a multi-center, open-label, pivotal Phase II clinical study for second-line or later treatment of recurrent or metastatic NPC, NCT02915432).

The JUPITER-02 study is the first international multi-center, double-blind, randomized Phase III clinical study in NPC immunotherapy with the largest sample size, and is the world's first Phase III clinical study in which there is preset statistical verification (Type I error control) for Overall Survival ("**OS**") in first-line immunotherapy combined with chemotherapy for NPC compared to chemotherapy alone that demonstrated a survival benefit. The results of the study were presented in an oral report during the Plenary Session of the 2021 annual meeting of the American Society of Clinical Oncology (ASCO) (#LBA2), and were subsequently featured on the cover of *Nature Medicine*. The results were also published in full in the *Journal of the American Medical Association* (*JAMA*). The results of the study showed that, compared to chemotherapy alone, toripalimab in combination with chemotherapy reduced the risk of disease progression by 48% and the risk of death by 37%. The median progression-free survival ("**PFS**") in the toripalimab in combination with chemotherapy group was prolonged by 13.2 months compared to chemotherapy alone, from 8.2 months to 21.4 months. In addition, patients treated with this combined therapy achieved a higher objective response rate ("**ORR**") and longer duration of response ("**DoR**"), with a complete response (CR) rate of 26.7%, and no new safety signal was identified. Long-term survival follow-up data was presented at ASCO 2024, with a 5-year survival rate of 52%.

The POLARIS-02 results were published online in January 2021 in the *Journal of Clinical Oncology*. The results showed that toripalimab demonstrated durable antitumor activity and a manageable safety profile in patients with recurrent or metastatic NPC who had failed prior chemotherapy, with an ORR of 20.5%, a DoR of 12.8 months, and a median OS of 17.4 months.

Toripalimab injection is the first domestic anti-PD-1 monoclonal antibody approved for marketing in China, and has won the "Chinese Patent Gold Award (中國專利金獎)", the top award in China's patent field. Over forty company-sponsored clinical studies covering more than fifteen indications have been conducted globally, including in China, the United States, Europe, and Southeast Asia. Ongoing or completed pivotal clinical studies evaluating the safety and efficacy of toripalimab cover a broad range of tumor types. As at the date of this announcement, there are ten approved indications for toripalimab in Chinese mainland. In December 2020, toripalimab injection was successfully negotiated into the National Reimbursement Drug List (the "**NRDL**") for the first time. At present, all ten approved indications have been included in the NRDL. Toripalimab is the only anti-PD-1 monoclonal antibody included in the NRDL for the treatment of melanoma, perioperative treatment of non-small cell lung cancer, treatment of renal carcinoma and treatment of triple negative breast cancer. In October 2024, toripalimab for the treatment of recurrent or metastatic NPC was approved in Hong Kong SAR, China.

In terms of international layout, as of the date of this announcement, toripalimab has been approved for marketing in the United States, the European Union, India, the UK, Jordan, Australia and other countries and regions. In addition, the Singapore Health Sciences Authority (HSA) accepted the new drug application for toripalimab in combination with cisplatin and gemcitabine, for the first-line treatment of adults with metastatic or recurrent, locally advanced NPC, and for toripalimab, as a single agent, for the treatment of adults with recurrent unresectable or metastatic NPC with disease progression on or after a platinum-containing chemotherapy.

IMPACT ON THE COMPANY

The NCE application was submitted under Project Orbis. Project Orbis, initiated and advocated by the Oncology Center of Excellence (OCE) of the U.S. Food and Drug Administration (the "**FDA**"), provides a collaborative mechanism and framework among the FDA and regulatory authorities in other countries and regions, allowing different regulatory authorities to jointly review the applications for registration of oncology drugs. Toripalimab was the first domestic oncology drug to be included in Project Orbis. Additionally, the TGA also granted an orphan drug designation to toripalimab for the treatment of NPC, which has accelerated review and registration process to a certain extent.

Following the approval, toripalimab becomes the first and only oncology immunotherapy drug for the treatment of NPC in Australia. The Company's partner Dr. Reddy's Laboratories Limited will be responsible for the commercialization of toripalimab in Australia. The Australian market is an important component of the overseas commercialization strategy of the Company. The approval will be conducive to the Company in further expanding to overseas markets and enhancing the international influence of the Company's products, which will have a positive impact on the Company's long-term operating results.

RISK WARNING

As pharmaceutical products are characterised by high technology, high risk and high added-value, and there is uncertainty since the commercialization of the drug is susceptible to various factors, including local policies and change in market environment, investors are advised to make cautious decisions and pay careful attention to investment risks. The Company and its partner will actively pursue the above projects and fulfill its information disclosure obligations in a timely manner for subsequent progress in strict compliance with relevant regulations.

By order of the Board
Shanghai Junshi Biosciences Co., Ltd.*
Mr. Xiong Jun
Chairman

Shanghai, the PRC, 17 January 2025

As at the date of this announcement, the Board of Directors of the Company comprises Mr. Xiong Jun, Dr. Li Ning, Dr. Zou Jianjun, Mr. Li Cong, Mr. Zhang Zhuobing, Dr. Yao Sheng, Dr. Wang Gang and Dr. Li Xin as executive Directors; Mr. Tang Yi as a non-executive Director; and Mr. Zhang Chun, Dr. Feng Xiaoyuan, Dr. Yang Yue, Mr. Li Zhongxian and Ms. Lu Kun as independent non-executive Directors.
