VOLUNTARY ANNOUNCEMENT – JS213 RECEIVED THE NOTICE OF APPROVAL FOR CLINICAL TRIAL

This announcement is made by Shanghai Junshi Biosciences Co., Ltd.* (上海君實生物醫藥科技股份有限公司) (the "**Company**") on a voluntary basis. Reference is also made to the overseas regulatory announcement of the Company dated 5 February 2025.

The board (the "**Board**") of directors (the "**Directors**") of the Company is pleased to announce that the Company has received the Notice of Approval for Clinical Trial* (《藥物臨床試驗批准通知書》) issued by the National Medical Products Administration. The investigational new drug application for AWT020 sterile powder for injection (project code: "**JS213**") has been approved. Relevant information is as follows:

ABOUT JS213

Drug name: AWT020 sterile powder for injection
Application matter: Clinical Trial of Domestic Production Registration of Pharmaceutical Product
Acceptance No.: CXSL2400793
Applicant: Shanghai Junshi Biosciences Co., Ltd.*
Review conclusion: According to the Drug Administration Law of the People's Republic of China* (《中華人民共和國藥品管理法》) and relevant regulations, upon review, the application for clinical trial of AWT020 sterile powder for injection accepted on 22 November 2024 meets the relevant requirements for drug registration, and it has been approved to conduct clinical trials as a monotherapy and in combination with other anti-tumor therapies in patients with advanced malignant tumors.

JS213 is a PD-1 and interleukin-2 ("**IL-2**") bifunctional antibody fusion protein, which is mainly used for the treatment of advanced malignant tumors. In view of the co-expression of PD-1 and IL-2 in the tumor microenvironment, the fusion protein can selectively activate the IL-2 signaling pathway by binding to the IL-2 receptor while blocking the PD-1 pathway, thereby strengthening the anti-tumor immune responses. The combination therapy with PD-1 and IL-2 has shown potential efficacy in a variety of tumor types. Compared with combination therapy, JS213 as a single agent targeting both PD-1 and IL-2 pathways, may be more effective in coordinating the activation and suppression of the immune system and thus enhancing anti-tumor activity. Preclinical studies have demonstrated that JS213 has a significant anti-tumor effect in multiple animal models. In addition, JS213 has a favorable, acceptable safety and tolerability profile. As of the date of this announcement, there is no bifunctional antibody fusion protein product with similar targets approved for marketing domestically and overseas. JS213 has entered into phase I clinical trial stage overseas.

RISK WARNING

Due to the high-tech, high-risk and high-value-added characteristics of pharmaceutical products, there are substantial risks and uncertainties in the process of drug research, development and commercialization. These many stages make it susceptible to uncertainties and therefore, investors are advised to make cautious decisions and pay careful attention to investment risks. The Company will actively pursue the above project and fulfill its information disclosure obligations in a timely manner for subsequent progress of the project in strict compliance with relevant regulations.

By order of the Board of
Shanghai Junshi Biosciences Co., Ltd.*
Mr. Xiong Jun
Chairman

Shanghai, the PRC, 5 February 2025

As at the date of this announcement, the Board of Directors of the Company comprises Mr. Xiong Jun, Dr. Li Ning, Dr. Zou Jianjun, Mr. Li Cong, Mr. Zhang Zhuobing, Dr. Yao Sheng, Dr. Wang Gang and Dr. Li Xin as executive Directors; Mr. Tang Yi as a non-executive Director; and Mr. Zhang Chun, Dr. Feng Xiaoyuan, Dr. Yang Yue, Mr. Li Zhongxian and Ms. Lu Kun as independent non-executive Directors.
