VOLUNTARY ANNOUNCEMENT – APPROVAL OF THE SUPPLEMENTAL NEW DRUG APPLICATION FOR TORIPALIMAB IN COMBINATION WITH BEVACIZUMAB FOR THE FIRST-LINE TREATMENT OF ADVANCED HCC

This announcement is made by Shanghai Junshi Biosciences Co., Ltd.* (上海君實生物醫藥科技股份有限公司) (the "**Company**") on a voluntary basis. Reference is also made to the overseas regulatory announcement of the Company dated 21 March 2025.

The board (the "**Board**") of directors (the "**Directors**") of the Company is pleased to announce that the Company has received the Drug Registration Certificate* (《藥品註冊證書》) issued by the National Medical Products Administration. The supplemental new drug application ("**NDA**") for the Company's product toripalimab (trade name: TUOYI®), in combination with bevacizumab for the first-line treatment of unresectable or metastatic hepatocellular carcinoma ("**HCC**") patients has been approved. This is the 11th indication of toripalimab being approved in China.

ABOUT TORIPALIMAB

Drug name: Toripalimab Injection
Application matter: Registration of pharmaceutical product (domestic production)
Acceptance Nos.: CXSS2400069, CXSS2400070
Certificate No.: 2025S00778, 2025S00779
Marketing Authorization Holder: Shanghai Junshi Biosciences Co., Ltd.*
Review conclusion: According to the Drug Administration Law of the People's Republic of China* (《中華人民共和國藥品管理法》) and relevant regulations, upon review, the product meets the relevant requirements for drug registration and the additional indication of the product is approved, in particular, the product in combination with bevacizumab for the first-line treatment of unresectable or metastatic HCC patients.

Globally, liver cancer is a common malignant tumor of the digestive system, and the main pathological type is HCC (accounting for about 90%). According to data released by the GLOBOCAN for 2022, the annual number of new cases and deaths of liver cancer worldwide in 2022 was 866,000 and 759,000, respectively. China has a high incidence of liver cancer. In 2022, the number of new liver cancer cases reached 368,000 (accounting for 42.4% of global cases), ranking fourth among domestic malignant tumors, with 317,000 deaths (accounting for 41.7% of global cases), ranking second among domestic malignant tumors. Due to its insidious onset, about 70%-80% of liver cancer patients in China are already at the intermediate or advanced stage at first diagnosis, with a median overall survival ("**OS**") of only approximately 10 months and a five-year survival rate of approximately 12%.

The supplemental NDA approval is based on data from the HEPATORCH study (NCT04723004), which is a multinational multi-center, randomized, open-label, active-controlled phase III clinical study. Professor Fan Jia (樊嘉), an academician of the Chinese Academy of Sciences, from Zhongshan Hospital affiliated to Fudan University* (復旦大學附屬中山醫院), served as the principal investigator. HEPATORCH study was launched in 57 clinical centers in the Chinese mainland, China's Taiwan and Singapore, and a total of 326 patients were enrolled, aiming to evaluate the efficacy and safety of toripalimab in combination with bevacizumab for the first-line treatment of unresectable or metastatic HCC compared to the standard treatment with sorafenib.

In September 2024, the results of the HEPATORCH study made its debut at the 27th National Clinical Oncology Conference and 2024 Chinese Society of Clinical Oncology (CSCO) Academic Annual Meeting, showing that the primary endpoints of progression free survival ("**PFS**", based on independent radiographic review) and OS both achieved positive results. Compared with sorafenib, toripalimab in combination with bevacizumab could significantly extend the PFS and OS of patients, with the median PFS of the two groups being 5.8 months vs. 4.0 months respectively, and reduce the risk of disease progression or death by 31% (hazard ratio HR=0.69, 95% CI: 0.525-0.913; P=0.0086), with the median OS of the two groups being 20.0 months vs. 14.5 months respectively, and reduce the risk of death by 24% (HR=0.76, 95% CI: 0.579-0.987; P=0.0394). The objective response rate ("**ORR**") of the toripalimab and bevacizumab group was significantly higher than that of the sorafenib group. The ORR of the two groups were 25.3% and 6.1% respectively. Futhermore, the combination therapy has a good safety profile in patients with advanced HCC. The toxicity spectrum is consistent with the known toxicity spectrum of monotherapy, and no new safety signal was identified.

Toripalimab injection is the first domestic PD-1 monoclonal antibody approved for marketing in China, and has won the "Chinese Patent Gold Award (中國專利金獎)", the top award in China's patent field. Over forty company-sponsored toripalimab clinical studies covering more than fifteen indications have been conducted globally, including in China, the United States, Europe, and Southeast Asia. Ongoing or completed pivotal clinical studies evaluating the safety and efficacy of toripalimab cover a broad range of tumor types. As of the date of this announcement, there are 11 approved indications for toripalimab in Chinese mainland. In December 2020, toripalimab injection was successfully negotiated into the National Reimbursement Drug List (the "**NRDL**") for the first time. At present, ten approved indications have been included in the NRDL. Toripalimab is the only anti-PD-1 monoclonal antibody included in the NRDL for the treatment of melanoma, perioperative treatment of non-small cell lung cancer, treatment of renal carcinoma and treatment of triple negative breast cancer. In October 2024, toripalimab for the treatment of recurrent or metastatic nasopharyngeal carcinoma was approved in Hong Kong SAR, China.

In terms of international layout, as of the date of this announcement, toripalimab has been approved for marketing in the United States, the European Union, India, the United Kingdom, Jordan, Australia and other countries and regions, and is also under review for marketing in various countries and regions worldwide.

RISK WARNING

Due to the high-tech, high-risk and high-value-added characteristics of pharmaceutical products, there are substantial risks and uncertainties in the process of drug research, development and commercialization. These many stages make it susceptible to uncertainties and therefore, investors are advised to make cautious decisions and pay careful attention to investment risks. The Company will actively pursue the described research and development project and fulfill its information disclosure obligations in a timely manner for subsequent progress in strict compliance with relevant regulations.

By order of the Board
Shanghai Junshi Biosciences Co., Ltd.*
Mr. Xiong Jun
Chairman

Shanghai, the PRC, 21 March 2025

As at the date of this announcement, the Board of Directors of the Company comprises Mr. Xiong Jun, Dr. Li Ning, Dr. Zou Jianjun, Mr. Li Cong, Mr. Zhang Zhuobing, Dr. Yao Sheng, Dr. Wang Gang and Dr. Li Xin as executive Directors; Mr. Tang Yi as non-executive Director; and Mr. Zhang Chun, Dr. Feng Xiaoyuan, Dr. Yang Yue, Mr. Li Zhongxian and Ms. Lu Kun as independent non-executive Directors.
