VOLUNTARY ANNOUNCEMENT – APPROVAL BY THE HSA FOR MARKETING OF TORIPALIMAB

This announcement is made by Shanghai Junshi Biosciences Co., Ltd.* (上海君實生物醫藥科技股份有限公司) (the "**Company**") on a voluntary basis. Please also refer to the overseas regulatory announcement published by the Company on 26 March 2025.

The board (the "**Board**") of directors (the "**Directors**") of the Company is pleased to announce that the New Drug Application (the "**NDA**") for toripalimab (Singapore trade name: LOQTORZI®) in combination with cisplatin and gemcitabine for the first-line treatment of adult patients with recurrent, not amenable to surgery or radiotherapy, or metastatic nasopharyngeal carcinoma ("**NPC**") has been approved by the Singapore Health Sciences Authority (the HSA). Toripalimab has become the first and only approved immuno-oncology treatment for NPC in Singapore.

ABOUT TORIPALIMAB

NPC is a malignant tumor that occurs in the epithelium mucosae of the nasopharynx and is one of the most common types of head and neck cancers. According to GLOBOCAN 2022 statistics, the number of newly diagnosed NPC cases in 2022 exceeded 120,000 worldwide. Toripalimab is the only preferred regimen recommended for the comprehensive treatment of recurrent or metastatic NPC in the National Comprehensive Cancer Network (NCCN) Guidelines (Version 1.2025) for head and neck cancers.

The approval of the NPC indications is primarily based on the results from JUPITER-02 (a randomized, double-blind, placebo-controlled, multinational multi-center Phase III clinical study for the first-line treatment of NPC, NCT03581786). The JUPITER-02 study is the first international multi-center, double-blind, randomized Phase III clinical study in NPC immunotherapy with the largest sample size, and is the world's first Phase III clinical study in which there is preset statistical verification (Type I error control) for Overall Survival (OS) in first-line immunotherapy combined with chemotherapy for NPC compared to chemotherapy alone that demonstrated a survival benefit. The results of the study were presented in an oral report during the Plenary Session of the 2021 annual meeting of the American Society of Clinical Oncology (ASCO) (#LBA2), and were subsequently featured on the cover of *Nature Medicine*. The results were also published in full in the *Journal of the American Medical Association (JAMA)*. The results of the study showed that, compared to chemotherapy alone, toripalimab in combination with chemotherapy reduced the risk of disease progression by 48% and the risk of death by 37%. The median progression-free survival (PFS) in the toripalimab in combination with chemotherapy group was prolonged by 13.2 months compared to chemotherapy alone, from 8.2 months to 21.4 months. In addition, patients treated with this combined therapy achieved a higher objective response rate (ORR) and longer duration of response (DoR), with a complete response (CR) rate of 26.7%, and no new safety signal was identified. Long-term survival follow-up data was presented at ASCO 2024, with a 5-year survival rate of 52%.

Toripalimab injection is the first domestic anti-PD-1 monoclonal antibody approved for marketing in China, and has won the "Chinese Patent Gold Award (中國專利金獎)", the top award in China's patent field. Over forty company-sponsored clinical studies covering more than fifteen indications have been conducted globally, including in China, the United States, Europe, and Southeast Asia. Ongoing or completed pivotal clinical studies evaluating the safety and efficacy of toripalimab cover a broad range of tumor types. As at the date of this announcement, there are 11 approved indications for toripalimab in Chinese mainland. In December 2020, toripalimab injection was successfully negotiated into the National Reimbursement Drug List (the "**NRDL**") for the first time. At present, ten approved indications have been included in the NRDL. Toripalimab is the only anti-PD-1 monoclonal antibody included in the NRDL for the treatment of melanoma, perioperative treatment of non-small cell lung cancer, treatment of renal carcinoma and treatment of triple negative breast cancer. In October 2024, toripalimab for the treatment of recurrent or metastatic NPC was approved in Hong Kong SAR, China.

In terms of international layout, as of the date of this announcement, toripalimab has been approved for marketing in the United States, the European Union, India, the UK, Jordan, Australia, Singapore and other countries and regions, and is also under review for marketing in various countries and regions worldwide.

IMPACT ON THE COMPANY

The NDA was submitted under Project Orbis. Project Orbis, initiated and advocated by the Oncology Center of Excellence (OCE) of the U.S. Food and Drug Administration (the "**FDA**"), provides a collaborative mechanism and framework among the FDA and regulatory authorities in other countries and regions, allowing different regulatory authorities to jointly review the applications for registration of oncology drugs. Toripalimab was the first domestic oncology drug to be included in Project Orbis. Previously, two New Chemical Entity applications of toripalimab for the treatment of NPC submitted by the Company to the Therapeutic Goods Administration of the Australian Government Department of Health and Aged Care (the "**TGA**") through Project Orbis had been approved by the TGA.

NPC is highly prevalent in Southeast Asia. Following the approval, toripalimab becomes the first and only approved immuno-oncology treatment for NPC in Singapore. The Singaporean market is an important component of the overseas commercialization strategy of the Company. The approval will be conducive to the Company in expanding the sales and marketing of its drugs in Southeast Asia, further promoting the expansion to overseas markets as a whole, and enhancing the international influence of the Company's products, which will have a positive impact on the Company's long-term operating results.

RISK WARNING

As pharmaceutical products are characterised by high technology, high risk and high added-value, and there is uncertainty since the commercialization of the drug is susceptible to various factors, including local policies and change in market environment, investors are advised to make cautious decisions and pay careful attention to investment risks. The Company will actively pursue the above projects and fulfill its information disclosure obligations in a timely manner for subsequent progress in strict compliance with relevant regulations.

By order of the Board
Shanghai Junshi Biosciences Co., Ltd.*
Mr. Xiong Jun
Chairman

Shanghai, the PRC, 26 March 2025

As at the date of this announcement, the Board of Directors of the Company comprises Mr. Xiong Jun, Dr. Li Ning, Dr. Zou Jianjun, Mr. Li Cong, Mr. Zhang Zhuobing, Dr. Yao Sheng, Dr. Wang Gang and Dr. Li Xin as executive Directors; Mr. Tang Yi as a non-executive Director; and Mr. Zhang Chun, Dr. Feng Xiaoyuan, Dr. Yang Yue, Mr. Li Zhongxian and Ms. Lu Kun as independent non-executive Directors.
