VOLUNTARY ANNOUNCEMENT – APPROVAL OF THE SUPPLEMENTAL NEW DRUG APPLICATION FOR TORIPALIMAB AS THE FIRST-LINE TREATMENT OF MELANOMA

This announcement is made by Shanghai Junshi Biosciences Co., Ltd.* (上海君實生物醫藥科技股份有限公司) (the "**Company**") on a voluntary basis. Reference is also made to the overseas regulatory announcement of the Company dated 25 April 2025.

The board (the "**Board**") of directors (the "**Directors**") of the Company is pleased to announce that the Company has received the Drug Registration Certificate* (《藥品註冊證書》) issued by the National Medical Products Administration. The supplemental new drug application ("**NDA**") for toripalimab (trade name: TUOYI®) as the first-line treatment for unresectable or metastatic melanoma has been approved. This marks the approval of toripalimab's 12th indication in the Chinese mainland.

ABOUT TORIPALIMAB

Drug name: Toripalimab Injection
Application matter: Registration of pharmaceutical product (domestic production)
Acceptance Nos.: CXSS2400084, CXSS2400085
Certificate Nos.: 2025S01146, 2025S01147
Marketing Authorization Holder: Shanghai Junshi Biosciences Co., Ltd.*
Review conclusion: According to the Drug Administration Law of the People's Republic of China* (《中華人民共和國藥品管理法》) and relevant regulations, upon review, the product meets the relevant requirements for drug registration and the additional indication of the product is approved, in particular, the product as the first-line treatment for unresectable or metastatic melanoma.

Melanoma is the most malignant type of skin cancer. According to GLOBOCAN 2022 statistics, approximately 332,000 new melanoma cases and 59,000 deaths were recorded globally that year. Though melanoma is relatively uncommon in China, its mortality rate is high (approximately 5,000 deaths amongst approximately 9,000 new cases in 2022) and its incidence rate is rising year by year. Since 2018, anti-PD-1 monoclonal antibodies have been approved for the second-line or later treatment of advanced melanoma in China and are widely used clinically. However, the first-line standard treatment for advanced melanoma is still dominated by traditional chemotherapy or targeted therapy (limited to patients with BRAF V600 mutation). Until now, no domestic anti-PD-1 monoclonal antibody had been approved for advanced melanoma in China, creating an urgent clinical need for first-line immunotherapy options.

The supplemental NDA approval is based on data from the MELATORCH study (NCT03430297). MELATORCH is a multi-center, randomized, open-label, positive-controlled Phase III clinical study, and is also the first pivotal registrational clinical study of a PD-(L)1 inhibitor as the first-line treatment for advanced melanoma that has yielded positive results. Led by Professor Guo Jun from Peking University Cancer Hospital* (北京大學腫瘤醫院) as the Principal Investigator, the study was conducted in 11 clinical centers across the country. The study was designed to compare the efficacy and safety of toripalimab versus dacarbazine for the systemic anti-tumor treatment-naive patients with unresectable or metastatic melanoma. Prior to this, the results of the MELATORCH study made its debut at the 27th National Clinical Oncology Conference and 2024 Chinese Society of Clinical Oncology (CSCO) Annual Meeting. The results showed that compared with the dacarbazine group (N=128), the progression-free survival ("**PFS**") assessed by Blinded Independent Central Review (BICR) of the toripalimab group (N=127) was significantly prolonged, with the median PFS of the two groups being 2.3 months vs. 2.1 months respectively, and the disease progression or mortality risk was reduced by 29.2% (hazard ratio HR=0.708, 95% CI: 0.526-0.954; P=0.0209). The sensitivity analysis of median overall survival ("**OS**"), corrected for the impact of subsequent anti-tumor treatment, showed that compared with the dacarbazine group, the toripalimab treatment group showed a significant trend towards survival benefit, with the median OS being 15.1 months vs. 9.4 months (HR=0.680, 95% CI: 0.486-0.951) respectively. Toripalimab has a good safety profile that is consistent with previous studies with no new safety signals identified.

Toripalimab injection is the first domestic PD-1 monoclonal antibody approved for marketing in China, and has won the "Chinese Patent Gold Award (中國專利金獎)", the top award in China's patent field. Over forty company-sponsored toripalimab clinical studies covering more than fifteen indications have been conducted globally, including in China, the United States, Europe, and Southeast Asia. Ongoing or completed pivotal clinical studies evaluating the safety and efficacy of toripalimab cover a broad range of tumor types. As of the date of this announcement, there are 12 approved indications for toripalimab in Chinese mainland. In December 2020, toripalimab injection was successfully negotiated into the National Reimbursement Drug List (the "**NRDL**") for the first time. At present, ten approved indications have been included in the NRDL. Toripalimab is the only anti-PD-1 monoclonal antibody included in the NRDL for the treatment of melanoma, perioperative treatment of non-small cell lung cancer, treatment of renal carcinoma and treatment of triple negative breast cancer. In October 2024, toripalimab for the treatment of recurrent or metastatic nasopharyngeal carcinoma was approved in Hong Kong SAR, China.

In terms of international layout, as of the date of this announcement, toripalimab has been approved for marketing in the United States, the European Union, India, the United Kingdom, Jordan, Australia, Singapore and other countries and regions, and is also under review for marketing in various countries and regions worldwide.

RISK WARNING

As pharmaceutical products are characterized as being of high technology, of high risks and with high added value, and the commercialization of drugs after being approved for marketing is subject to certain uncertainties, investors are advised to make cautious decisions and pay careful attention to investment risks. The Company will actively pursue the described project and fulfill its information disclosure obligations in a timely manner for subsequent progress in strict compliance with relevant regulations.

By order of the Board
Shanghai Junshi Biosciences Co., Ltd.*
Mr. Xiong Jun
Chairman

Shanghai, the PRC, 25 April 2025

As at the date of this announcement, the Board of Directors of the Company comprises Mr. Xiong Jun, Dr. Li Ning, Dr. Zou Jianjun, Mr. Li Cong, Mr. Zhang Zhuobing, Dr. Yao Sheng, Dr. Wang Gang and Dr. Li Xin as executive Directors; Mr. Tang Yi as a non-executive Director; and Mr. Zhang Chun, Dr. Feng Xiaoyuan, Dr. Yang Yue, Mr. Li Zhongxian and Ms. Lu Kun as independent non-executive Directors.
