Voluntary Announcement

New Indication of Olverembatinib Included into China 2024 National Reimbursement Drug List

Ascentage Pharma Group International (the "**Company**" or "**Ascentage Pharma**") is pleased to announce that the new indication of its novel drug, olverembatinib (HQP1351), has been included into the China 2024 National Basic Medical Insurance, Work Injury Insurance and Maternity Insurance Reimbursement Drug List (the "**New Version of the NRDL**") through the simple contract renewal process. Concurrently, the indications of olverembatinib which were included in 2022 have gone through successful contract renewal. This means that all commercialized indications of olverembatinib have been included in the New Version of the NRDL. The current reimbursable scope of olverembatinib is: adult patients with CML-CP or accelerated-phase CML (CML-AP) harboring the T315I mutation, and adult patients with chronic-phase chronic myeloid leukemia (CML-CP) resistant and/or intolerant of first- and second-generation tyrosine kinase inhibitors (TKIs). The New Version of the NRDL shall take effect from January 1, 2025 onwards.

Olverembatinib is a novel drug developed by Ascentage Pharma with support from the National Major New Drug Development Program in China and the first third-generation BCR-ABL inhibitor approved by the China National Medical Products Administration (NMPA). As a novel drug, olverembatinib can effectively target BCR-ABL and a spectrum of BCR-ABL mutants, including the T315I mutation. In November 2021, olverembatinib received its first approval in China, thus became the first therapy approved for the treatment of T315I mutant CML in the country. In November 2023, olverembatinib was approved for the treatment of adult patients with CML-CP resistant and/or intolerant of first- and second-generation TKIs. Olverembatinib is being jointly commercialized in China by Ascentage Pharma and Innovent Biologics, Inc.

CML is a hematologic malignancy of the white blood cells. The introduction of BCR-ABL TKIs have significantly improved the management of CML. However, TKI resistance is still a global challenge for CML treatment. 20%~40% of patients fail to achieve desired treatment outcome due to resistance or intolerance to TKIs[1-3], thus leading to disease progression or even death. The successful renewal and the inclusion of additional indication of olverembatinib in the New Version of the NRDL is expected to greatly improve the drug's accessibility, bringing benefit to more and a broader population of patients with CML in China.

Olverembatinib is an investigational drug that has not been approved for any indication outside China.

By order of the Board
Ascentage Pharma Group International
Dr. Yang Dajun
Chairman and Executive Director

Suzhou, People's Republic of China, November 28, 2024

As at the date of this announcement, the Board of Directors of the Company comprises Dr. Yang Dajun as Chairman and executive Director, Dr. Wang Shaomeng and Dr. Lu Simon Dazhong as non-executive Directors, and Mr. Ye Changqing, Mr. Ren Wei and Dr. David Sidransky and Ms. Marina S. Bozilenko and Dr. Debra Yu as independent non-executive Directors.
